**Construction Notes Peat Deposition Areas:**

- (1) An interceptor drain will also be installed upslope of the peat deposition areas.
- (2) A silting pond will be required at the lower side of the peat deposition areas.
- (3) It is important that the surface of the stored peat be shaped to allow efficient run-off of water from the stored spoil.
- (4) Supervision by a geotechnical engineer or appropriately competent person is recommended for the construction of the peat deposition area.
- (5) All the above-mentioned general guidelines and requirements will be implemented during construction.
- (6) Further guidelines on the construction of the peat storage area are included within Section 7.5 of the Peat & Spoil Management Plan.

**KEYPLAN**  
Scale 1:50000

**Construction Notes:**

- 1) Spoil heap may consist of peat and overburden from local excavations.
- 2) Stored material should be shaped to allow surface water to run-off.
- 3) Placed / spread spoil should be allowed to re-vegetate naturally from plant species in the area.
- 4) Supervision by suitably qualified is required during the works.
